

The Vaccine Agenda

Big Pharm. The Biochemical Industry, The Drug Companies.

Operating for money & profit has always been the objective of the Biochem industry.

It has a history stretching back over hundreds of years.

The scientists who had the original breakthroughs into curing illness by stimulating the body's glands & enzymes with plant extracts to bring about recovery were ignored. A few years later a further breakthrough identified that these glands & enzymes could be deadened to get rid of the symptoms of illness.

This was then hailed as a cure and payments could be charged for treatment.

The Biochem Industry also has a history of damage to humanity with its irresponsible distribution of dangerous drugs.

They have always added dangerous contaminants to vaccines like mercury, lead & aluminium.

Epidemics of polio, cancer, drug addiction, sterilisation, Opioids, HIV, Sars, auto immune disease, sars-covid.... Have been spread by vaccines.

Genetically Modified foods, fake meat, have been introduced into the food chain.

Nowadays of course they seem to spend most of their time researching into spreading disease with mosquitoes, ticks & locusts and implanting track & trace digital Nano chips.

They are also producing food additives, colouring or preservatives, which are dangerous to humans. And water contaminants which will cause sterility in the domestic population. Currently, seed oils used to replace fats in foods have caused the increase in digestive disorders & uncontrolled weight problems in the western population.

They have even used their supposed ethical investment in Universities to create new diseases which they can then use to sell drugs to cure.

One American University was given finance to create an illness for children.

They came up with a hyper active child syndrome known as ADHD.

A lot of the hyper active child syndrome was normal child behaviour but there were also food additives which caused this reaction. Aspartame etc

The symptoms of attention deficit hyperactivity disorder (ADHD) (NHS website)

The symptoms of attention deficit hyperactivity disorder (ADHD) can be categorised into 2 types of behavioural problems: inattentiveness, and hyperactivity and impulsiveness.

Most people with ADHD have problems that fall into both these categories, but this is not always the case. For example, some people with the condition may have problems with inattentiveness, but not with hyperactivity or impulsiveness.

This form of ADHD is also known as attention deficit disorder (ADD). ADD can sometimes go unnoticed because the symptoms may be less obvious.

The solution to this problem was obviously drugs.

In the USA many Doctors or therapists who promoted alternative health cures were assassinated. The doctor who actually identified the cause of autism (MMR vaccines) was also killed.

All government consumer protection agencies have been shut down or switched to corporate objectives. Local councils have been stripped of powers to regulate anything. Charities have been infiltrated & corrupted.

There is no longer any protection for the domestic population.
